

Understanding Normal Movement for Paediatric Therapists

Course description

This two day course is designed to introduce participants to the concept of movement analysis in the assessment and treatment of children with neurodevelopmental disorders. Participants will be able to describe key components relating to the analysis of postures and movement sequences and learn how to facilitate movement with the opportunity to practice handling skills.

“..A great introduction to a fresh way of thinking about how to work more dynamically with our clients..”

*“..Very practical and relevant especially working with children with CP..”
(Geelong course, 2019)*
